Inventory Management System Capstone ->

~ Submission By Pryanshu Gupta(pryanshug88@gmail.com)

Watch the Running Project Video here(Private and unlisted on youtube):- Link
Or Copy Paste this url: **https://www.youtube.com/watch?v=a3c70-DEHDs**
*** The video is private and only accessible through this unique link shared with you, no one without this link can watch this video**

Instructions to run code in VM->

- My Backend Port deployed on tomcat is: **8081**
- Inventory service Base url for Testing is: localhost:8081/inventory
- Vendor Service endpoint is: localhost:8081/vendor
- Material Service endpoint is: localhost:8081/material
- Frontend Application port is: **3001** (cause 3000 was in use by **gitea** in vm)
- npm run dev to start my frontend(it is Vite Packed)
- React Application base url in api.js-> http://localhost:8081/inventory

Instructions to run code in Local System->

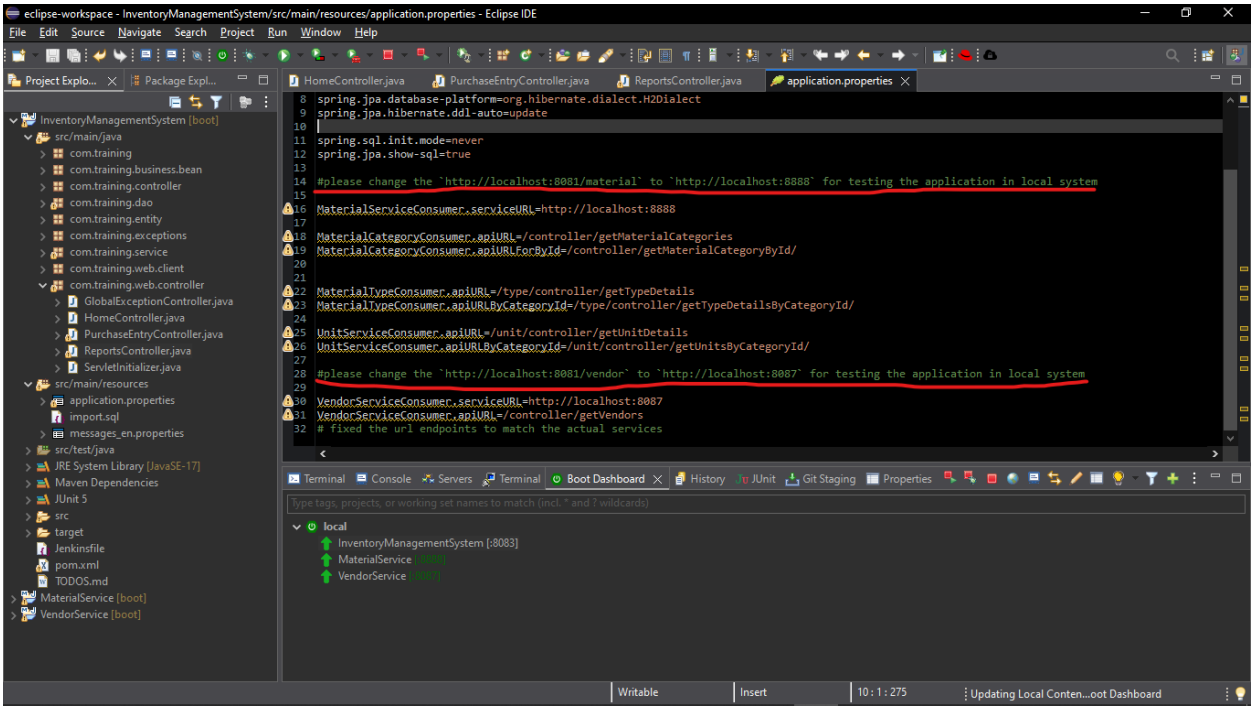

- Vendor Service Port- **localhost:8087**
- Material Service Port- **localhost:8888**
- IMS Service Port- **localhost:8083**
- React Application base url in api.js-> http://localhost:8083

Note:- Change the Local system ports as shown above in the IMS application-> application.properties(comments provided)

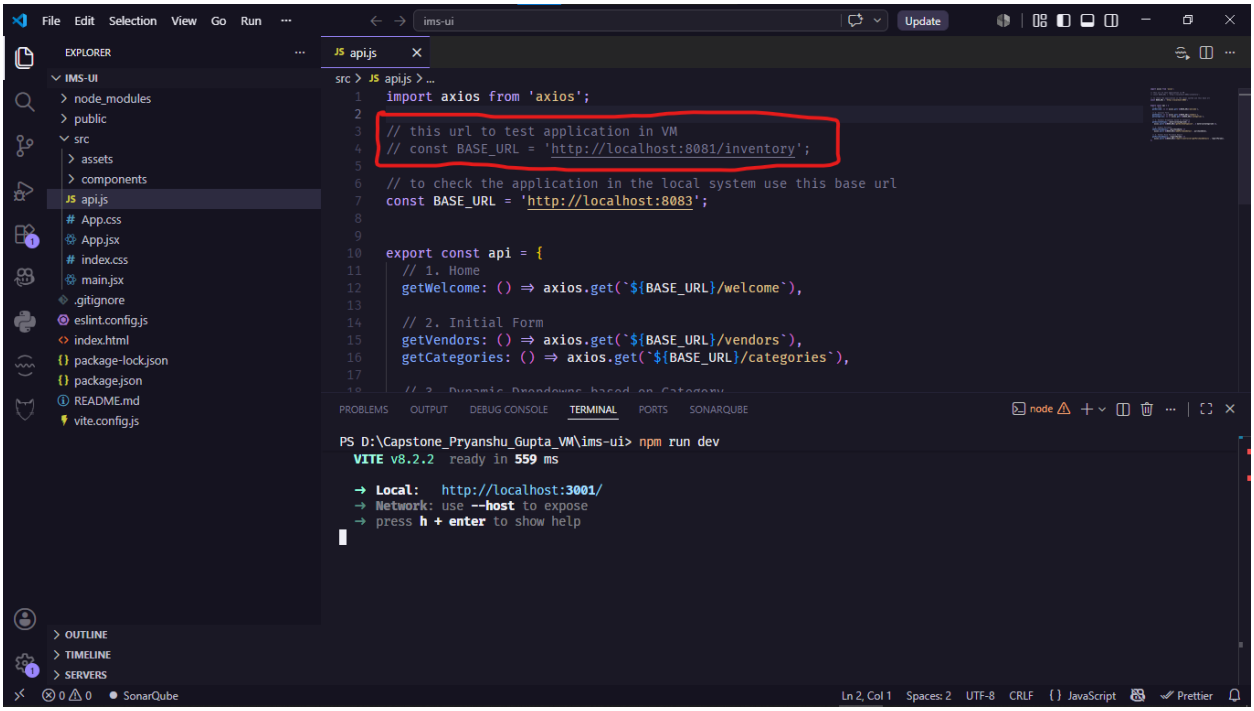

Note:- I removed the Third Party Dependency and Build/Target files from the project folder to compress it under 100 MB. (Please install the node modules through npm install and build the maven project again.)

Below are the Proofs of my implementation of the code->

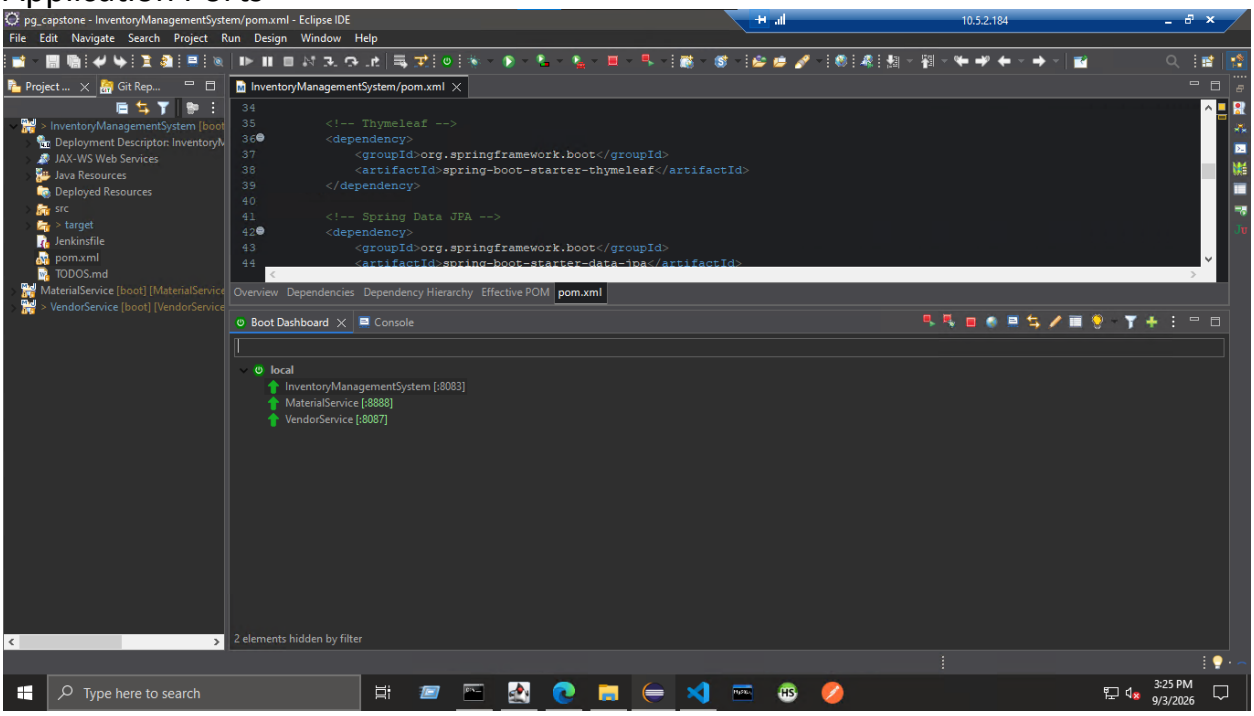

Application.properties of InventoryManagementSystem

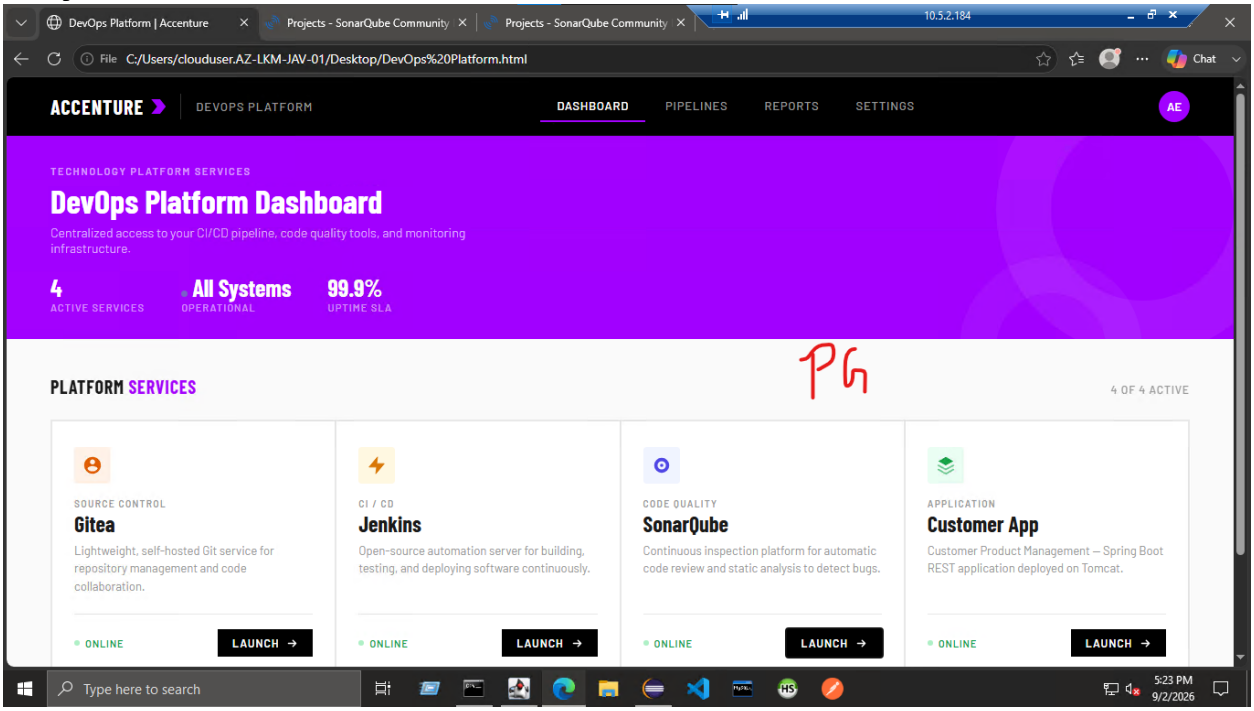

Application Endpoints in React Application Frontend->

Application Ports

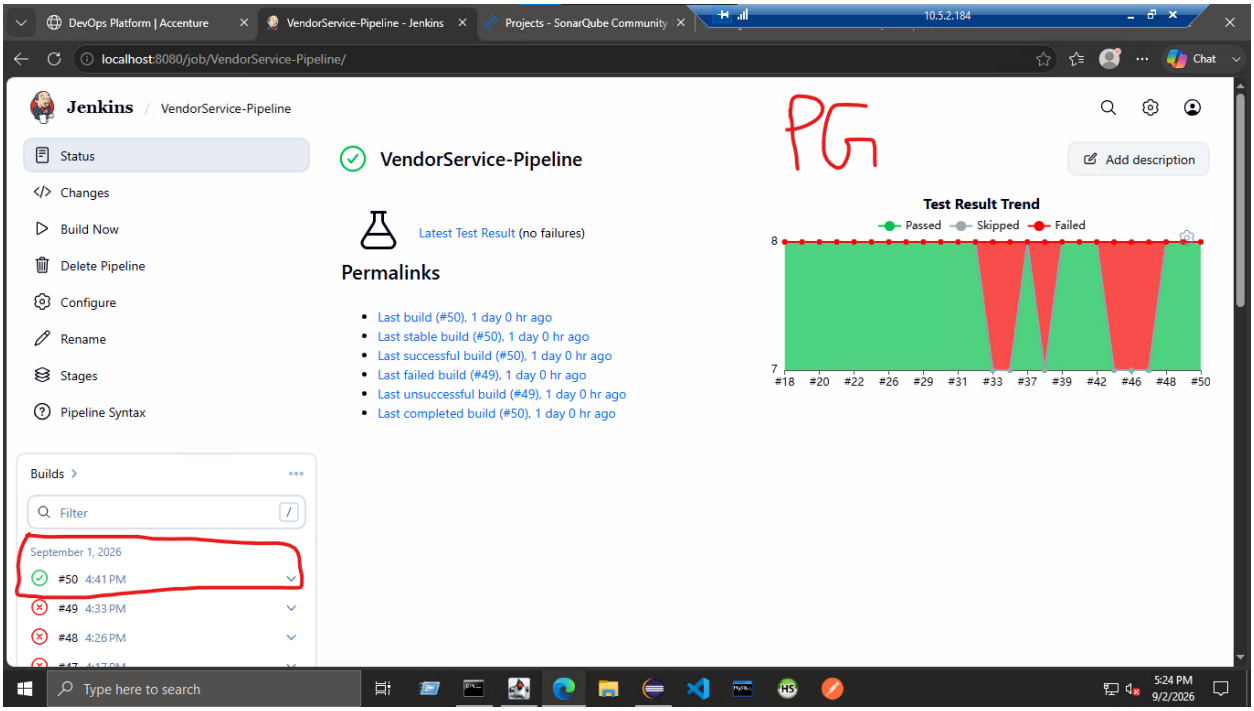

Day-1 : Completed setup of All the required tools and pipeline

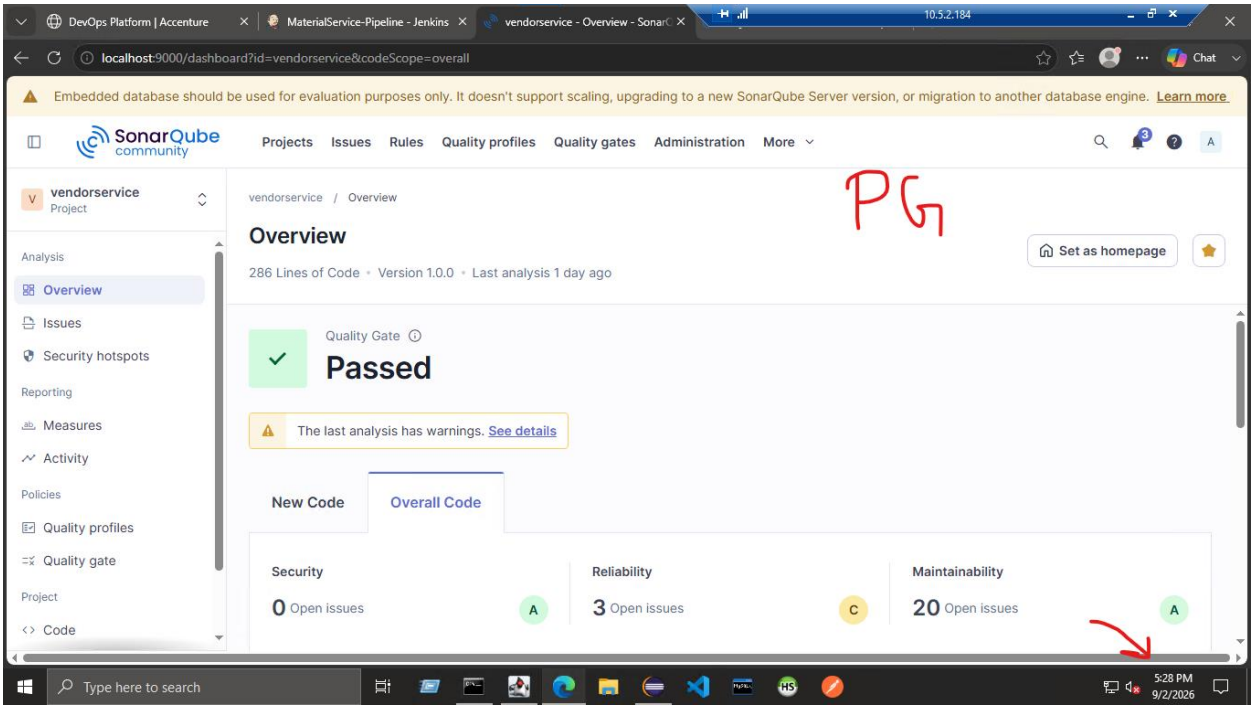

Jenkins Build success for the Vendor Service and vendor service deployed on-

http://localhost:8081 (on tomcat)

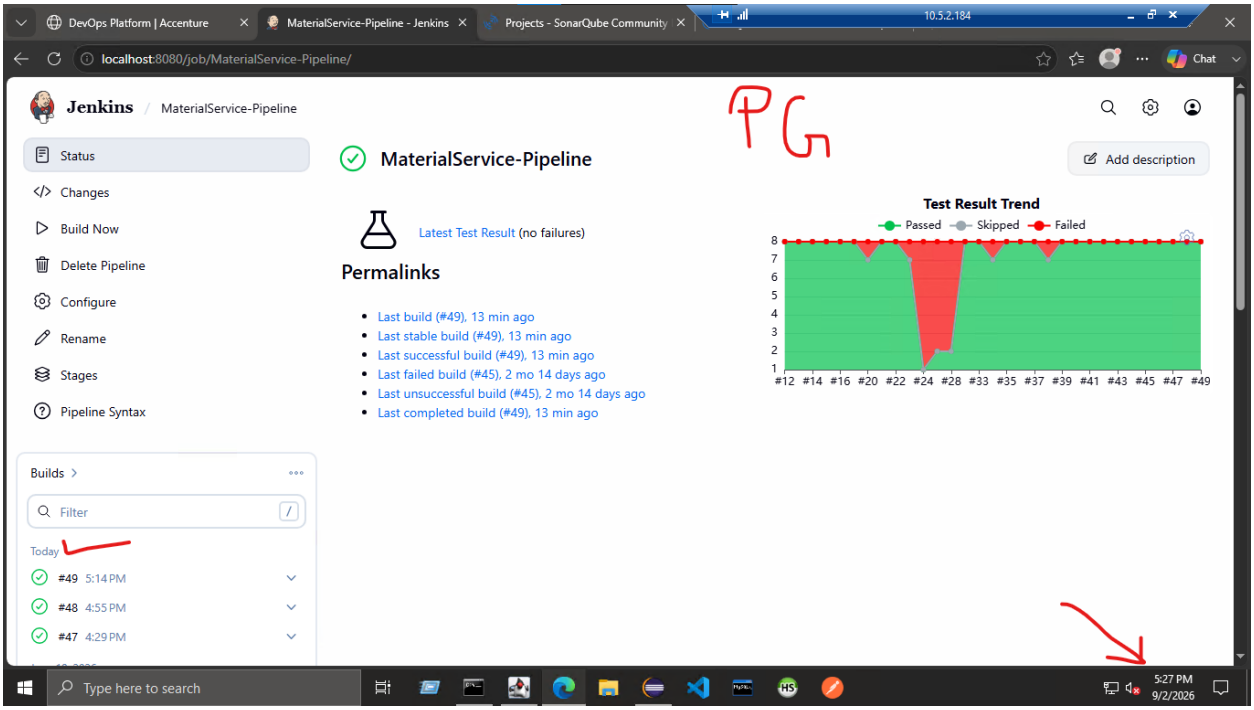

Sonarqube Quality Gate passed for Vendor Service

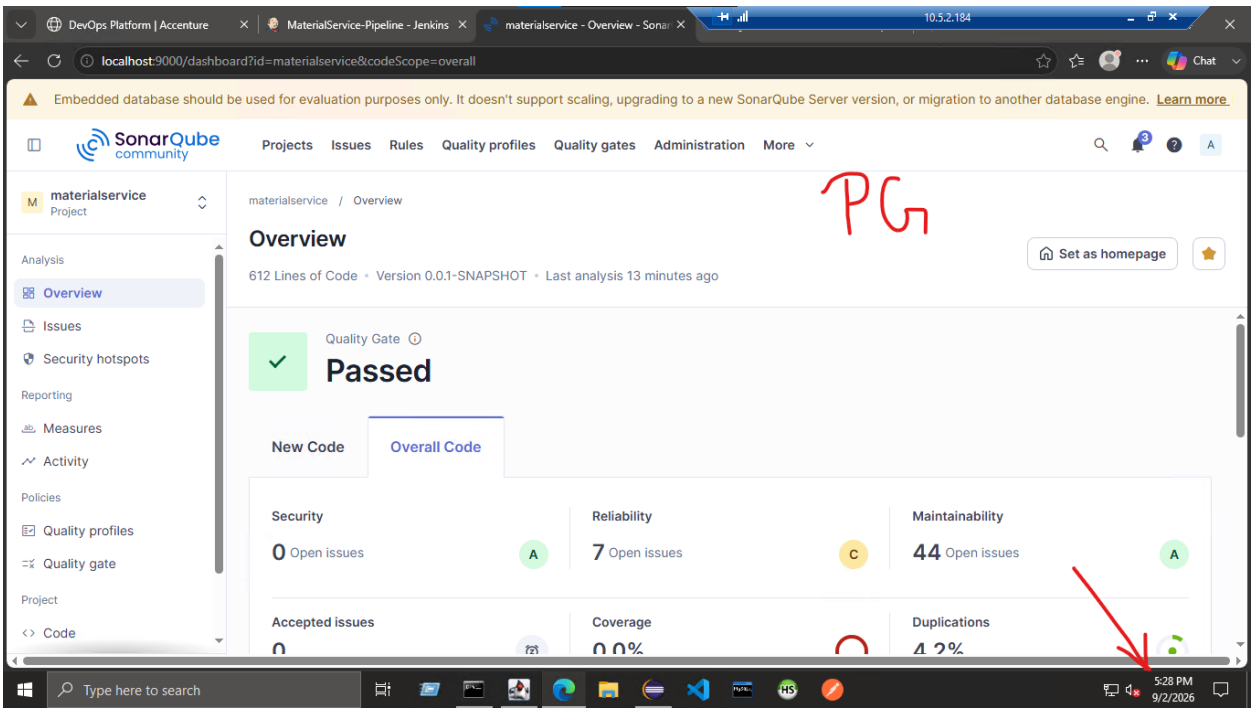

User Story-01 Completed

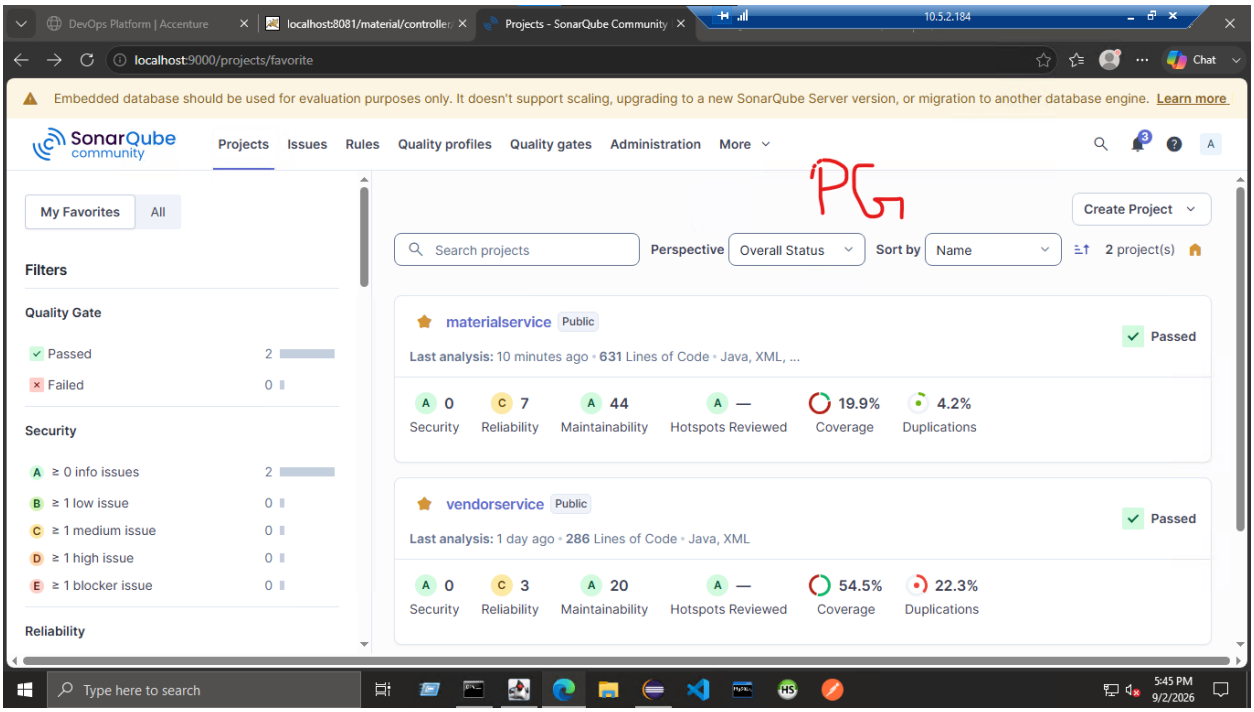

Day-2: Worked on the ToDos of Material Service and build success screenshot of the same. Application deployed on http://localhost:8081 (tomcat)

Day-3: Sonarqube Quality Gate passed for the Material Service.

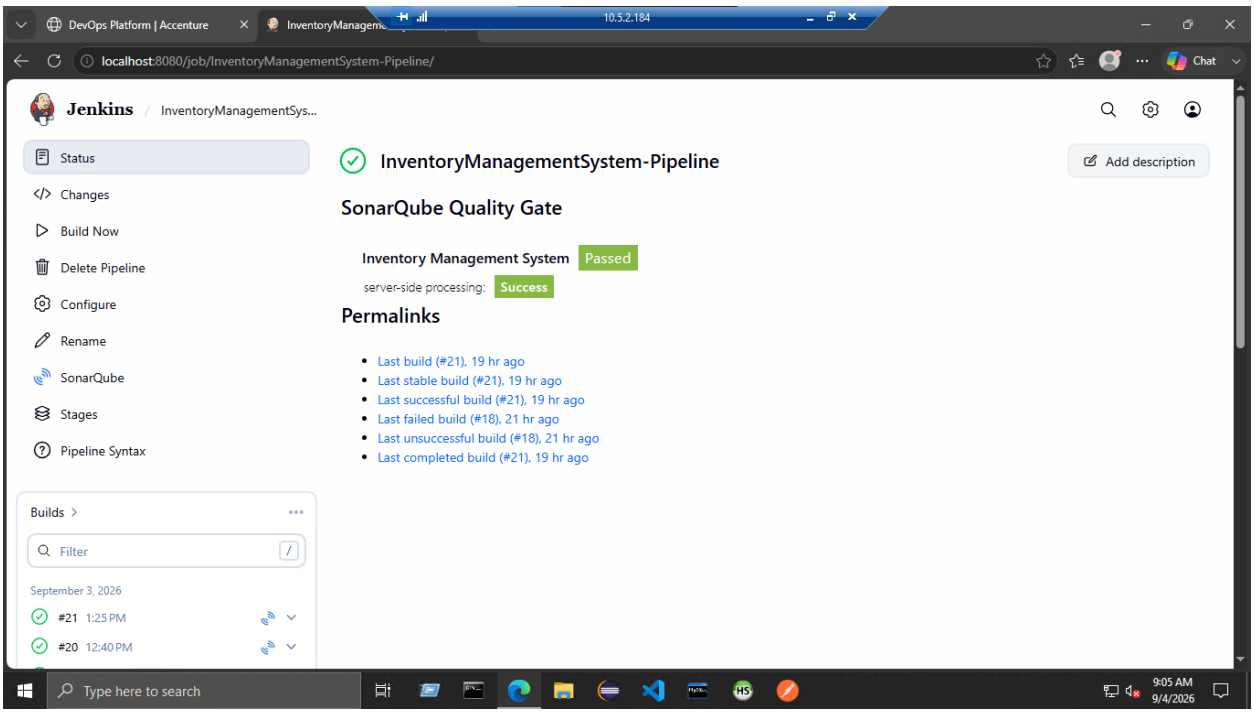

Sonarqube projects dashboard

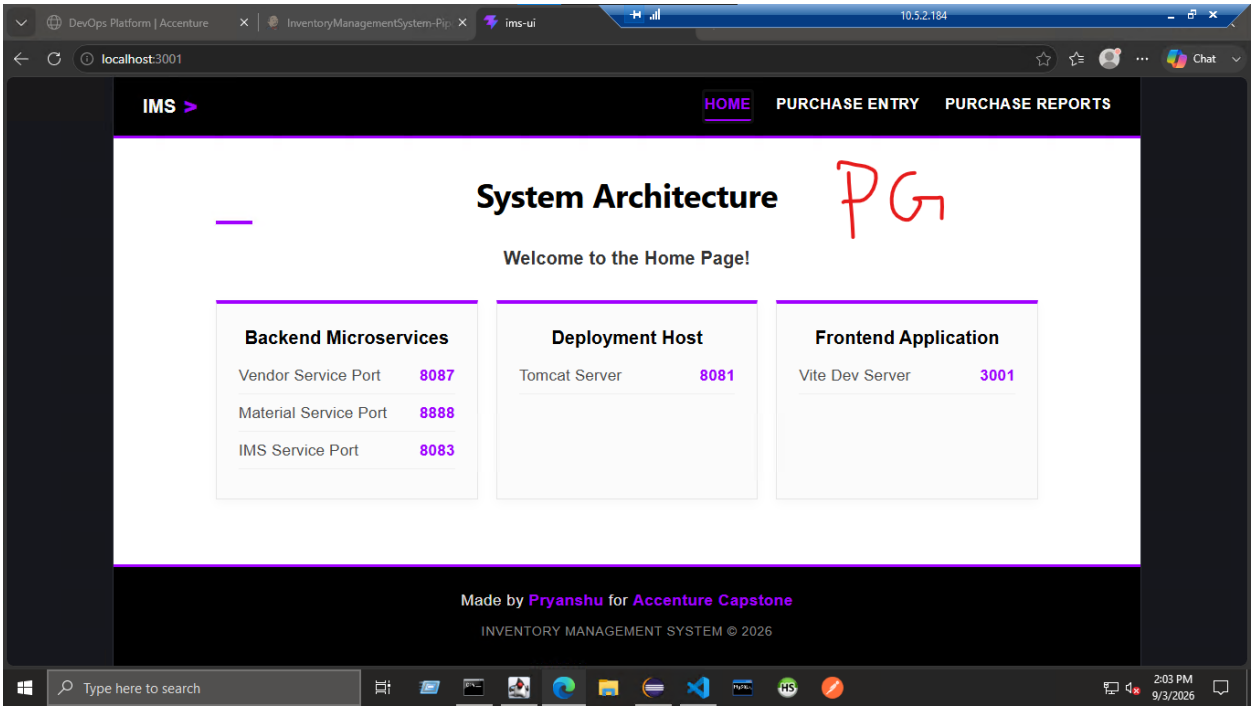

User Story-02 Completed

Day-4: Worked on the Inventory Management System Service build

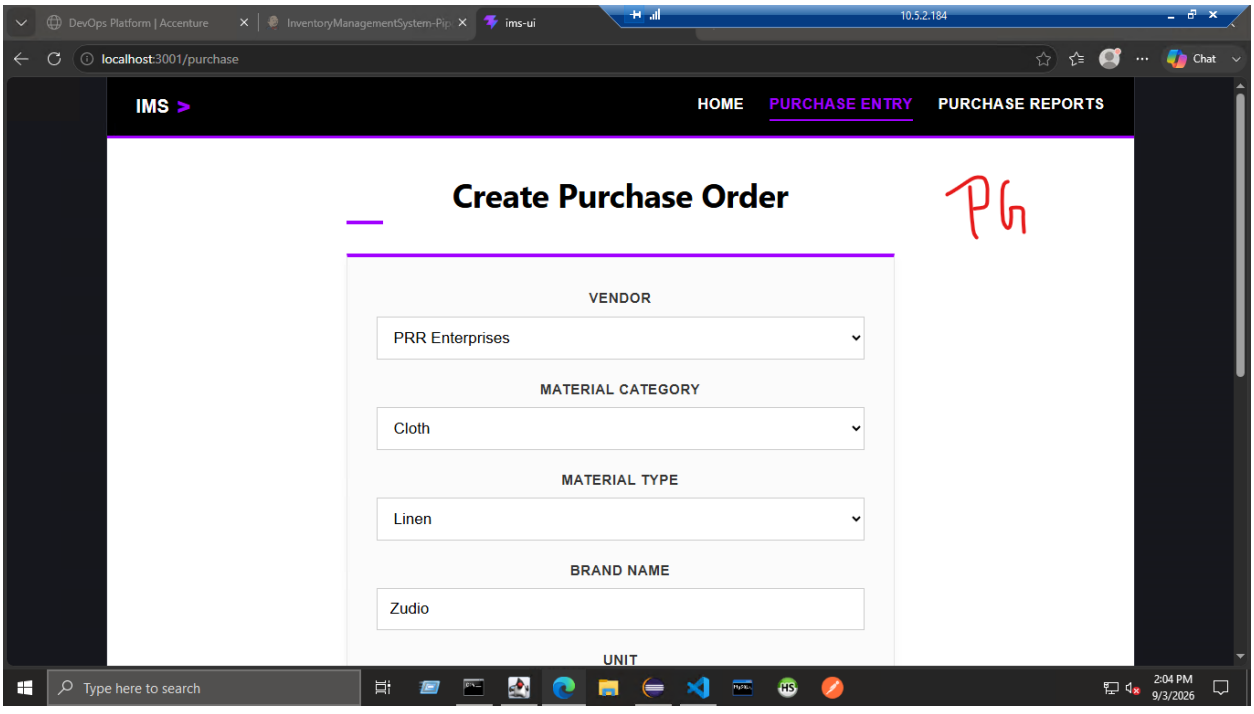

Day-5: Worked on the UI Creation using React and Integration with Inventory Management System Service
